

CUMBERLAND-COLCHESTER

Agriculture Crops as Biofuels

WHEREAS renewable energy resources, such as geothermal and bio-fuels, are an important part of our energy future and have the potential to play a critical role in developing our rural economies;

AND WHEREAS resources that may yield these and other renewable energy sources need to be both protected and promoted to protect our environment and to ensure a secure energy and economic future for future generations;

THEREFORE BE IT RESOLVED that renewable energy resources, such as geothermal water resources, be protected from damage and given priority in considering the development and extraction of other non-renewable resources, such as coal; and

THEREFORE BE IT FURTHER RESOLVED that a Liberal Government fully explore and implement policies to encourage and develop the growth of agricultural crops, other than forest products, for use in the creation and manufacture of bio-fuels.
